crowbe.github.io

Senior software engineer working in applied AI, with 6+ years building production systems across TypeScript, React/Next.js, Ruby on Rails, Python and event-driven architecture. At Culture Amp I work directly on Coach, the company's agentic AI system, where I prototyped and shipped a human-in-the-loop pattern for AI-written content that four product domains have adopted. Strong end-to-end operator, from product ambiguity through technical design, implementation, release and iteration, and I build the harnesses and tooling that help engineering teams work well with AI.

Experience

2026 — Sep 2026 – Present

Senior Software Engineer (AI)

Culture Amp Sydney, Hybrid

LangChain, Next.js, Ruby on Rails, Python, Kafka

- Work directly on Coach, Culture Amp's agentic AI system.
- Building an agent harness for my team that encodes our ways of working with AI: skills, scripts and deterministic checks for planning, sharing plans, dispatching work and reviewing it, plus trace capture so the harness itself keeps improving. Built for Claude Code Enterprise and other tools, and adopted by my team with good feedback.

2024 — Nov 2024 – Sep 2026

Software Engineer

Culture Amp Sydney, Hybrid

- Prototyped, wrote the RFC for, and built and shipped most of Coach's human-in-the-loop pattern, which lets the agent write content such as reviews, feedback and conversation topics with guaranteed, audited human approval. Iterated on the pattern as it was adopted; four product domains use it so far.
- Delivered complex enterprise AI product features in a SaaS environment, working through ambiguous requirements with product, design and engineering to ship production-ready outcomes.
- Independently owned implementation across frontend, backend, infrastructure and event-driven architecture, so the team could adjust priorities quickly without heavy cross-team handoffs.
- Led performance improvements for early-access features ahead of GA release: identified query bottlenecks, executed critical fixes and coordinated supporting work across the team.
- Helped drive engineering adoption of AI-assisted development, a stated company priority, producing practical tutorials and tooling that improved confidence, repeatability and delivery speed.

Skills

AI and agents

LLM integration, Agentic systems, Human-in-the-loop design, Tool and function calling, MCP and WebMCP, LangChain, OpenAI API, Claude Code, Prompt engineering, Context engineering, Harness engineering, Tracing, Evals and fine-tuning (personal projects)

Languages and frameworks

TypeScript, JavaScript, Python, Ruby, React, Next.js, Node.js, Ruby on Rails, Express, Fastify, Tailwind CSS, three.js

Data and infrastructure

PostgreSQL, REST, GraphQL, Kafka, Temporal, AWS, GCP, Docker, CI/CD, LaunchDarkly, Observability and monitoring

Quality and delivery

TDD, RSpec, Vitest, Test strategy, RFCs and technical design, Code review, Cross-team pairing, Developer education

Education

Diploma of Information Technology

Coder Academy
Feb 2019 – Aug 2019
MERN stack, Ruby on Rails

Diploma of Outdoor Recreation

Avondale College
2010 – 2011

Benjamin Crow
bennycrow91@gmail.com crowbe.github.io

2022
Jul 2022 – Nov 2024

Software Engineer / Product Lead

Mars United Commerce Australia, Hybrid

React, Ruby on Rails, CI/CD, Product Operations

- Identified and implemented improvements to the feedback and issue pipeline, reducing time to resolution by ~40%.
- Eliminated security vulnerabilities by driving key upgrades, including major version upgrades of Ruby and Rails in the core backend service.
- Reduced local development startup time by ~30% through targeted dependency pruning, with faster CI/CD pipelines as a secondary gain.

2020
Dec 2020 – Jul 2022

Junior to Mid Software Engineer

Mars United Commerce Australia, Hybrid

- Promoted from junior to mid-level within 6 months on delivery quality and growing autonomy.
- Migrated legacy codebases from Material-UI to Tailwind with zero production issues.

2019
Feb 2019 – Nov 2020

Freelance Developer

Career change into software Australia and Japan

- Completed a 6-month coding intensive at Coder Academy (MERN stack, Ruby on Rails) after teaching myself Python through structured online courses in 2018.
- Took on freelance client work, including website design and build, while based in Japan.
- Contracted with a pre-launch startup: owned the testing strategy for its pre-release application, catching critical security and scalability issues before launch, and rebuilt chat, notifications and search from a legacy jQuery app in React, making them web-native and mobile-friendly.

2011
2011 – 2018

Guide to Program Coordinator

Outdoor recreation, several organisations Australia

- Progressed from guide to Program Coordinator across multiple organisations over eight years, coordinating teams delivering outdoor education and adventure programs.
- Managed program logistics, participant safety and team coordination across multi-day programs with external stakeholders, requiring constant risk assessment and real-time decision-making.

Writing

When Agents Join the Team

Three-part series, May 2026

1. Headless Agents Make HR a Work-Architecture Problem
2. AI Agents Make Management More Important, Not Less
3. Agents Get Better by Becoming More Human

Agentic Content Apps

Three-part series, Apr 2026

1. Personal Agents Make Experience More Important Than Content Acquisition
2. The Hard Part of Letting Agents Gather Content
3. Trustworthy Agentic Apps Need Device-First Architecture

AI-drafted with Claude and ChatGPT; I direct, source and edit.

Projects

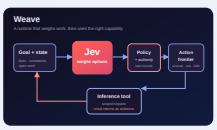

Reno Layouts Live

TypeScript, React, three.js, WebMCP

A browser-based floor-plan studio for renovation planning, where an agent works the same live 2D/3D model through WebMCP tools. Runs client-side with no backend.

layout-bench.vercel.app

Weave Active development

TypeScript, agent runtime, evaluation

An experimental goal-directed runtime combining bounded model judgment with explicit authority, replayable evidence and capability crystallisation through TDD.

github.com/CrowBe/weave

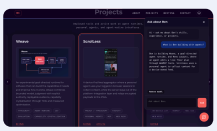

ScrolLess Active development

Preact, TypeScript, Fastify, MCP, Web Push

A device-first feed aggregator: a personal agent collects content through your logged-in browser sessions, and the server only relays encrypted payloads.

github.com/CrowBe/ScrolLess

Portfolio site agent Live

On-device LLM, WebMCP, tool use

An on-device browser model answers questions about my work through explicit site functions, also exposed as WebMCP tools.
