

Benjamin Crow

Full Stack Engineer · AI-Augmented Delivery · Sydney, NSW

bennycrow91@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

SUMMARY

Full Stack Engineer with 6+ years building production systems across TypeScript React/Next.js, Ruby on Rails, and event driven architecture. Currently delivering AI native features, embedded into an enterprise SaaS product. Consistently rated “over performing” for leading work to deliver ahead of schedule with AI-augmented workflow and cross functional ownership. Built internal tooling and enablement content that accelerated engineering team velocity and AI adoption organisation-wide. I’m passionate about the potential of AI to solve problems, through software and other fields of knowledge-work, that have until now been out of reach.

WORK EXPERIENCE

Culture Amp Sydney · Hybrid Software Engineer

Nov 2024 – Present

LangChain | Next.js | Ruby on Rails | Python | Kafka

- Consistently leading complex full-stack features to a delivery date 20–30% ahead of schedule through AI-augmented workflows and an attitude of ownership across functions/domains.
- Designed, built and released an internal Claude Code plugin that created a deterministic Jira → PR workflow; now adopted across multiple engineering teams and featured in the organisation’s official engineering enablement guide.
- Produced and delivered an organisation-wide AI pair-programming tutorial that accelerated team AI maturity and velocity.
- Independently architected and delivered features across Frontend, Backend, IaC and Event Driven Architecture, enabling my team to adjust priorities rapidly with a flexible skillset.

Mars United Commerce ANZ (XPO Brands / The Mars Agency) Australia · Hybrid Software Engineer / Product Lead

Jul 2022 – Nov 2024

React | Ruby on Rails | CI/CD | Product Operations

- Drove multiple product initiatives from ideation to deployment, translating stakeholder requirements directly into shipped software.
- Identified and implemented improvements to feedback and issue pipeline. Reduced time to resolution by ~40%
- Eliminated security vulnerabilities by driving key upgrades, including major version upgrades for Ruby and Rails in the core backend service.
- Reduced local development startup time by ~30% through targeted dependency pruning; improved CI/CD pipeline speed as a secondary gain.

Junior → Mid Software Engineer

Dec 2020 – Jul 2022

- Junior to Mid-level Engineer within 6 months based on delivery quality and growing autonomy
- Migrated legacy codebases from Material-UI to modern Tailwind styling with 0 production issues

Career Transition — Outdoor Recreation to Software Engineering Australia · Japan Freelance Developer

Feb 2019 – Nov 2020

- Completed a 6-month coding intensive at Coder Academy (MERN stack, Ruby on Rails), after self-directing into Python through structured online courses in 2018.
- Took on freelance client work including website design and build while based in Japan.
- Contracted with a pre-launch startup and owned the testing strategy for a pre-release application, catching critical security and scalability issues before launch. Brought key features (chat, notifications, and search) from a legacy jQuery app into React, making them web-native and mobile-friendly.

- Progressed from guide to Program Coordinator across multiple organisations over eight years, coordinating teams delivering outdoor education and adventure programs.
- Managed program logistics, participant safety, and team coordination for activities requiring constant risk assessment and real-time decision-making.
- Coordinated multi-day programs with external stakeholders including schools and organisations, managing logistics, safety, and team delivery to schedule.

SKILLS

Full-Stack Product Delivery: End-to-end ownership from ideation through deployment. Experienced scoping features, managing stakeholders, and shipping across React/Next.js, Ruby on Rails, and Node.js.

Platform & Infrastructure: CI/CD pipeline ownership, cloud deployment (AWS, GCP), monitoring, and event-driven systems (Kafka, Temporal). LaunchDarkly feature management.

AI-Augmented Engineering: Daily use of LLM tooling and agentic workflows to accelerate delivery. Builds documentation, videos, and plugins to enable AI adoption across engineering teams. Active contributor to industry discussions on AI in development and product.

Quality & Testing: Writes and maintains test suites, enforces coverage standards, and has owned testing strategy for pre-release products. TDD practitioner.

Technical Leadership: Produces internal documentation and educational content (written guides, videos, plugins) supporting developer adoption of new tooling. Active in code review and cross-team pairing.

PROJECTS

For more information or examples check [my profile site](#) or [Github](#)

- **ScrollLess** [In Development, 2026] — New full-stack application (2026 launch).
- **crypto-price-pwa** [Production] — Live cryptocurrency price progressive web app. [build-six-delta.vercel.app](#)
- **react-hooks-library** [Released] — Published NPM package of reusable React hooks.
npmjs.com/package/react-hooks-library
- **intelligent-admin** [In Development] — AI assistant powered by MCP connections and LLM inference

EDUCATION

Coder Academy — Diploma, Information Technology
(MERN Stack, Ruby on Rails)

Feb – Aug 2019

Avondale College — Diploma, Outdoor Recreation

2010 – 2011
