

Benjamin Crow

Full Stack AI Engineer · Sydney, NSW

bennycrow91@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

SUMMARY

Full Stack AI Engineer with 6+ years building production systems across TypeScript, React/Next.js, Ruby on Rails, Python, and event-driven architecture (Kafka, Temporal). Owns delivery end to end — from ambiguous product requirements through technical design, implementation, release, and iteration — with a focus on quality: test coverage, performance, and maintainability. Recent work spans enterprise AI SaaS features, agentic developer tooling, and engineering enablement that improved team velocity and delivery quality.

WORK EXPERIENCE

Culture Amp · Sydney · Hybrid

Nov 2024 – Present

Software Engineer | LangChain · Next.js · Ruby on Rails · Python · Kafka

- Delivered complex enterprise AI product features in a SaaS environment, working through ambiguous requirements with product, design, and engineering to ship production-ready outcomes.
- Independently owned implementation across frontend, backend, infrastructure, and event-driven architecture, enabling the team to adjust priorities quickly without heavy cross-team handoffs.
- Led performance improvements for EAP features ahead of GA release, identifying query bottlenecks, executing critical fixes, and coordinating supporting work across the team.
- Helped drive engineering adoption of AI-assisted development as a stated company priority, producing practical tutorials and tooling that improved confidence, repeatability, and delivery speed.

Mars United Commerce ANZ (XPO Brands / The Mars Agency) · Australia · Hybrid

Jul 2022 – Nov 2024

Software Engineer / Product Lead | React · Ruby on Rails · CI/CD · Product Operations

- Identified and implemented improvements to the feedback and issue pipeline, reducing time to resolution by ~40%.
- Eliminated security vulnerabilities by driving key upgrades, including major version upgrades for Ruby and Rails in the core backend service.
- Reduced local development startup time by ~30% through targeted dependency pruning; improved CI/CD pipeline speed as a secondary gain.

Junior → Mid Software Engineer

Dec 2020 – Jul 2022

- Junior to Mid-level Engineer within 6 months based on delivery quality and growing autonomy.
- Migrated legacy codebases from Material-UI to modern Tailwind styling with 0 production issues.

Career Transition — Outdoor Recreation to Software Engineering · Australia · Japan

Feb 2019 – Nov 2020

Freelance Developer

- Completed a 6-month coding intensive at Coder Academy (MERN stack, Ruby on Rails), after self-directing into Python through structured online courses in 2018.
- Took on freelance client work including website design and build while based in Japan.
- Contracted with a pre-launch startup and owned the testing strategy for a pre-release application, catching critical security and scalability issues before launch. Brought key features (chat, notifications, and search) from a legacy jQuery app into React, making them web-native and mobile-friendly.

Outdoor Recreation Industry · Australia

2011 – 2018

Guide → Program Coordinator

- Progressed from guide to Program Coordinator across multiple organisations over eight years, coordinating teams delivering outdoor education and adventure programs.
- Managed program logistics, participant safety, and team coordination across multi-day programs with external stakeholders, requiring constant risk assessment and real-time decision-making.

SKILLS

Full-Stack Product Delivery: End-to-end ownership from ideation through deployment. Scopes features, manages stakeholders, ships across React/Next.js, Ruby on Rails, and Node.js.

Platform & Infrastructure: CI/CD pipeline ownership; AWS production deployment (GCP incl. Maps API integration); monitoring; event-driven systems — Kafka, and Temporal for topic consumption and async data processing/validation. LaunchDarkly feature management.

AI-Native Engineering: Daily agentic workflows and LLM tooling in delivery. Drove AI-assisted development adoption at Culture Amp through tutorials, videos, and internal plugins. Builds agent-supervision and MCP-connected products (see Projects).

Quality & Testing: TDD practitioner. Writes and maintains test suites, enforces coverage standards, owned testing strategy for pre-release product.

Technical Leadership: Active in code review and cross-team pairing. Internal documentation and developer education supporting new-tooling adoption.

PROJECTS

More on my [portfolio site](#) or [GitHub](#)

- **agent.branch** [In Development] — Author and validate AI agent skills: chat-driven builder, logic diagrams, mocked test-runs, trigger checks, portable SKILL.md export.
- **ClawFace** [In Development] — React Native (Expo) mobile app for supervising and directing AI coding agents: QR pairing, Ed25519-authenticated WebSocket protocol, approval workflows, push notifications.
- **ScrollLess** [Open Source] — Agent-powered feed aggregator with E2E-encrypted relay: MCP server + Fastify backend, Preact PWA client, Web Push. Hosted launch planned 2026. github.com/CrowBe/ScrollLess
- **crypto-price-pwa** [Production] — Live cryptocurrency price progressive web app. build-six-delta.vercel.app
- **react-hooks-library** [Released] — Published NPM package of reusable React hooks. npmjs.com/package/react-hooks-library

EDUCATION

Coder Academy — **Diploma, Information Technology** (MERN Stack, Ruby on Rails)

Feb – Aug 2019

Avondale College — **Diploma, Outdoor Recreation**

2010 – 2011
