

Benjamin Crow

Full Stack Engineer · AI-Augmented Delivery · Sydney, NSW
benny_crow91@hotmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

SUMMARY

Full Stack Engineer with 5+ years building production systems across JavaScript/TypeScript, Ruby on Rails, and React/Next.js. A background leading high-stakes outdoor programs built a bias toward outcomes, risk assessment, and getting teams to a result—instincts that carried directly into engineering. Entering the industry at a time when strong coding fundamentals still came first meant building real instinct for code quality before AI tooling matured. That combination—enough craft to spot bad code, enough drive to ship, and the judgment to manage risk—is what makes AI-augmented engineering effective. Consistently rated “over performing” at Culture Amp.

WORK EXPERIENCE

Culture AmpSydney · Hybrid

Software EngineerNov 2024 – Present

- Consistently delivered features ahead of schedule—uses AI tools to iterate on planning docs fast, writes code across the stack, briefs other developers, and works with product and design to close gaps.
- Adopted AI and agentic coding workflows to ship large features ahead of estimated timeframes while maintaining high engineering quality.
- Built and released an internal Claude Code plugin that creates a deterministic workflow from Jira ticket to PR, seeing adoption across the engineering org.
- Recorded an AI pair programming tutorial that featured in the organisation’s engineering enablement guide.
- Unblocked teammates through active pairing, recognised internally for full-stack flexibility and ownership.

Mars United Commerce ANZ (formerly XPO Brands / The Mars Agency)Australia · Hybrid

Software Engineer / Product LeadJul 2022 – Nov 2024

- Drove multiple product initiatives from ideation to deployment, translating stakeholder requirements directly into shipped software.
- Eliminated security vulnerabilities by upgrading the core platform from Ruby 2 to Ruby 3 alongside a major Rails version migration.
- Reduced local development startup time by ~30% through targeted dependency pruning; improved CI/CD pipeline speed as a secondary gain.
- Expanded test coverage across new and legacy code, enforcing quality standards on an established codebase.

Junior → Mid Software EngineerDec 2020 – Jul 2022

- Promoted from Junior to Mid-level Engineer within 18 months based on delivery quality and growing autonomy.
- Built a staff rostering and tracking system that reduced administrative overhead by more than 10%.
- Migrated the front-end from Material UI to Tailwind CSS, bringing more consistency to the UI across the application.

Career Transition — Outdoor Recreation to Software EngineeringAustralia · Japan

Freelance DeveloperFeb 2019 – Nov 2020

- Completed a 6-month coding intensive at Coder Academy (MERN stack, Ruby on Rails), after self-directing into Python through structured online courses in 2018.
- Took on freelance client work including website design and build while based in Japan.

- Contracted with UZE Pty Ltd: owned the testing strategy for a pre-release application, catching critical security and scalability issues before launch. Brought key features—chat, notifications, and search—from a legacy jQuery app into React, making them web-native and mobile-friendly.

Outdoor Recreation Industry Australia

Guide → Program Coordinator 2011 – 2018

- Progressed from guide to Program Coordinator across multiple organisations over eight years, coordinating teams delivering outdoor education and adventure programs.
- Managed program logistics, participant safety, and team coordination for activities requiring constant risk assessment and real-time decision-making.
- Coordinated multi-day programs with external stakeholders including schools and organisations, managing logistics, safety, and team delivery to schedule.

SKILLS

Full-Stack Product Delivery: End-to-end ownership from ideation through deployment. Experienced scoping features, managing stakeholders, and shipping across React/Next.js, Ruby on Rails, and Node.js.

Platform & Infrastructure: CI/CD pipeline ownership, cloud deployment (AWS, GCP), monitoring, and event-driven systems (Kafka, Temporal). LaunchDarkly feature management.

AI-Augmented Engineering: Daily use of LLM tooling and agentic workflows to accelerate delivery. Builds documentation, videos, and plugins to enable AI adoption across engineering teams. Active contributor to industry discussions on AI in development and product.

Quality & Testing: Writes and maintains test suites, enforces coverage standards, and has owned testing strategy for pre-release products. TDD practitioner.

Technical Leadership: Produces internal documentation and educational content (written guides, videos, plugins) supporting developer adoption of new tooling. Active in code review and cross-team pairing.

PROJECTS

intelligent-admin [Production] — AI assistant powered by MCP connections. Agentic workflow design with Python and Claude API.

ScrollLess [In Development] — New app project (2026).

crypto-price-pwa [Production] — Live cryptocurrency price PWA. [build-six-delta.vercel.app](#)

react-hooks-library [Released] — Published NPM package — reusable React hooks.
npmjs.com/package/react-hooks-library

More examples at github.com/CrowBe and crowbe.github.io

EDUCATION

Coder Academy — Diploma, Information Technology (MERN Stack, Ruby on Rails) Feb – Aug 2019

Avondale College — Diploma, Outdoor Recreation 2010 – 2011
